

LiveDataLab Leaderboard Competition
Team BABL

Please upload your progress report to the Github repo shared on CMT. The progress report should give us an idea of how you're implementing your proposal. It should answer 3 main questions:

1) Which tasks have been completed?

- Identify the dataset for the Leaderboard Competition Creation:
<https://www.kaggle.com/datasets/yasserh/twitter-tweets-sentiment-dataset>
- Performed exploratory data analysis on the dataset
- Outlined the scoring criteria for the Leaderboard Competition

2) Which tasks are pending?

- Obtaining Microsoft Azure credentials for LiveDataLab
- Setting up LiveDataLab
- Cleaning the dataset, building a classifier (on Google Colab) and template for competitors
- Building function to score the submissions
- Error handling for faulty submissions
-

3) Are you facing any challenges?

- There is no documentation provided on how to complete any tasks related to the LiveDataLab competition

We spoke with a TA about our problem here and he told us that he also did not know about this leaderboard competition and that he would ask the professor for the credentials for us to use for our competition. We were told that he would email us the credentials after speaking with the professor and provide us guidance on the project, but we never received any and are still waiting for his response and credentials to work on microsoft azure livedatalab.
